According to our (Global Info Research) latest study, the global TGV (Through Glass Via) Fabrication market size was valued at US\$ 522 million in 2025 and is forecast to a readjusted size of US\$ 1685 million by 2032 with a CAGR of 18.4% during review period.

Through-glass via (TGV) fabrication is a technology that makes tiny vertical through-holes through high-quality borosilicate glass or quartz glass substrates and fills the through-holes with conductive materials to achieve electrical connections. This technology uses laser etching, inductively coupled plasma dry etching and other methods to prepare through-holes. It has the advantages of excellent high-frequency electrical properties, strong mechanical stability, low cost, and simple process flow. It has broad application prospects in the fields of Mini/Micro LED direct display and semiconductor advanced packaging substrates and other precision devices.
