Abstracts

Thermally conductive adhesive transfer tapes are designed to provide a preferential heat-transfer path between heat-generating components and heat sinks or other cooling devices (e.g., fans, heat spreaders or heat pipes).

SCOPE OF THE REPORT:

This report focuses on the Thermal Conduction Tape in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. This tape is tacky pressure-sensitive adhesive loaded with thermally conductive ceramic fillers that do not require a heat cure cycle to form an excellent bond to many substrates. Only pressure is needed to form an excellent bond and thermal interface. The specialized chemistry of the 8810 tapes renders it modestly soft and able to wet to many surfaces, allowing it to conform well to non-flat substrates, provide high adhesion, and act as a good thermal interface.

This tape offers excellent adhesive performance with good wetting and flow onto many substrate surfaces, and offers both good thermal conductivity and good electrical insulation properties.

The worldwide market for Thermal Conduction Tape is expected to grow at a CAGR of roughly 5.4% over the next five years, will reach 590 million US\$ in 2023, from 430 million US\$ in 2017, according to a new GIR (Global Info Research) study.
