Abstracts

The global Thermal Conductive Epoxy Die Attach Adhesive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal Conductive Epoxy is a heat-cured system. Thermal conductivity of a typical unfilled epoxy system has a very low value of 0.14 W/(m•K). This key property can be increased by adding metallic or ceramic fillers to the adhesive formulation. The type of filler, concentration of particles, their size and shape will determine the thermal conductivity of the product.

Die attach adhesives are used to attach semiconductor chips to packaging substrates. In addition to forming the attachment, they can help mitigate stress and control warpage during system operation. Some die attach adhesives are formulated to be both thermally conductive and electrically insulating.

This report studies the global Thermal Conductive Epoxy Die Attach Adhesive production, demand, key manufacturers, and key regions.
