According to our (Global Info Research) latest study, the global Thermal Conductive Metal Core PCB market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

MCPCB is a PCB that uses metal materials as the dormant part of the circuit board. MCPCB is composed of a thermal conductive layer (diIMS layer), metal plate and copper foil. It has special magnetic permeability, excellent refrigeration performance, high strength and good processing performance. The purpose of the MCPCB core is to conduct heat away from critical PCB mechanical components to less critical areas such as the metal support backing or metal core. Common base materials for metal core PCBs are aluminum, copper, or a mixture of copper-specific metal alloys.
