Abstracts

Thermally Conductive Gap Fillers are soft, malleable interface materials with high thermal conductivity. Gap fillers are ideal for applications with significant distances between the heat source and cooling surface, varying component heights, high tolerance stack up variability, and uneven or rough surfaces. The number of available material options and formats make gap fillers a popular component to thermal management solutions. Thermally Conductive Gap Fillers are naturally tacky on at least one side, which improves handling during assembly. Some materials are available with tackiness on both sides. Softer materials tend to have higher tackiness.

This report studies the global Thermal Conductivity Liquid Gap Fillers production, demand, key manufacturers, and key regions.
