According to our (Global Info Research) latest study, the global Thermal CTP market size was valued at USD 355 million in 2023 and is forecast to a readjusted size of USD 352.6 million by 2030 with a CAGR of -0.1% during review period.

CtP refers to the process of imaging digital printing data (created by a computer) directly onto a printing plate. A thermal CtP recorder uses a high-power near-infrared laser to image digital printing data onto specially processed aluminum-base printing plates. CtP completely eliminates the need for film output and subsequent film to plate image transfer. Since processing is completely digital, there are no variations between plates, which results in superior printing quality.

Thermal CtP offers more vivid image reproduction and higher quality than violet CtP. Thermal CtP can also be used in a daylight environment, which both eliminates the need for a darkroom and makes operation much more convenient.

Global Thermal CTP key players include Kodak, Screen, Heidelberg, Agfa, etc. Global top four manufacturers hold a share over 55%.

China is the largest market, with a share about 50%, followed by Japan, and Europe, both have a share about 40 percent.
