## Abstracts

The global Thermal CTP market size is expected to reach \$ 352 million by 2032, rising at a market growth of -0.1% CAGR during the forecast period (2026-2032).

CtP refers to the process of imaging digital printing data (created by a computer) directly onto a printing plate. A thermal CtP recorder uses a high-power near-infrared laser to image digital printing data onto specially processed aluminum-base printing plates. CtP completely eliminates the need for film output and subsequent film to plate image transfer. Since processing is completely digital, there are no variations between plates, which results in superior printing quality.

Thermal CtP offers more vivid image reproduction and higher quality than violet CtP. Thermal CtP can also be used in a daylight environment, which both eliminates the need for a darkroom and makes operation much more convenient.

Global Thermal CTP key players include Kodak, Screen, Heidelberg, Agfa, etc. Global top four manufacturers hold a share over 55%.

China is the largest market, with a share about 50%, followed by Japan, and Europe, both have a share about 40 percent.

In terms of product, Semi-automatic CTP is the largest segment, with a share over 35%. And in terms of application, the largest application is Business, followed by Newspaper, Business or packaging Mix, Packaging, etc.

This report studies the global Thermal CTP production, demand, key manufacturers, and key regions.
