Thermal curing novolac CE resin is a cycloaliphatic epoxy?phenolic resin system that cures through heat to form a highly crosslinked, thermally stable polymer network. It offers excellent heat resistance, chemical stability, flame retardancy, and electrical insulation performance.

The industrial chain includes upstream suppliers of phenol, formaldehyde, epoxy intermediates, curing agents, and additives. The midstream consists of resin manufacturers conducting polycondensation, epoxy modification, formulation, and controlled thermal curing processing. Downstream applications include electronic packaging, printed circuit boards, semiconductor encapsulation, composites, coatings, and high-temperature insulation materials.
