According to our (Global Info Research) latest study, the global Thermal Desorption Unit (TDU) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Thermal Desorption Units (TDU) are specialized pieces of equipment that use heat to remove contaminants from a variety of materials. The contaminated material is placed in the TDU where it is heated to a high temperature for a period of time. This process vaporizes the contaminants, leaving the material clean and dry. With Thermal Desorption Units, contaminated material is exposed to heat indirectly by contact with a slowly turning drum that is exposed to heat on the outer shell. Vaporized contaminants are separated from the solids in the sludge, resulting in an end product that can be disposed of easily and cost-effectively.
