Thermal double-layer CTP plate is an offset printing plate used in the printing industry and is mainly used in digital plate making (CTP, Computer-to-Plate) technology. It has two main layers: Thermosensitive layer: Thermosensitive material responds to heat, usually by transferring image information to the plate via a laser during exposure. Laser heating causes chemical changes in the coating in specific areas, creating an image. Base layer: The material that supports the thermal layer and is used to withstand the pressure and other operations generated during the printing process. The advantages of thermal double-layer CTP plates include improved printing quality, reduced production time, reduced chemical usage, and improved production efficiency. It is widely used in commercial printing, packaging printing and other fields.
