Abstracts

According to our (Global Info Research) latest study, the global Thermal Flow Controller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A thermal flow controller is a device used to measure and control the flow of gases. It is based on the principle of heat conduction and utilizes one or more thermal sensors to measure the velocity and flow of gas. The working principle of thermal flow controller is realized by heating element and temperature sensor. As the gas passes through the flow controller, the heating element heats a portion of the gas and keeps it at a constant temperature differential. The temperature sensor measures the temperature of the gas near the heating element and calculates the flow rate and flow of the gas based on the temperature difference.
