Abstracts

The global Thermal Flow Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A thermal flow controller is a device used to measure and control the flow of gases. It is based on the principle of heat conduction and utilizes one or more thermal sensors to measure the velocity and flow of gas. The working principle of thermal flow controller is realized by heating element and temperature sensor. As the gas passes through the flow controller, the heating element heats a portion of the gas and keeps it at a constant temperature differential. The temperature sensor measures the temperature of the gas near the heating element and calculates the flow rate and flow of the gas based on the temperature difference.

This report studies the global Thermal Flow Controller production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Thermal Flow Controller, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
