Abstracts

According to our (Global Info Research) latest study, the global Thermal Ignition Rate Analyzer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The thermal ignition rate analyzer is an instrument used to measure the mass loss of solid waste (such as domestic waste, medical waste, hazardous waste, etc.) at high temperatures. Its working principle is to put the sample into a far-infrared heating device, weigh the mass of the sample during the heating process under specific atmospheric conditions, a specified temperature, and a specified time, and thereby calculate the thermal ignition rate of the sample. The advantage of the thermal ignition rate analyzer is that it can realize automated, fast and accurate determination of the thermal ignition rate of solid waste, providing a basis for the classification, utilization, processing and supervision of solid waste.
