According to our (Global Info Research) latest study, the global Thermal Imager Core market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Thermal imager cores are the heart of thermal cameras. They consist of an infrared sensor array that detects thermal radiation and converts it into an electrical signal. This signal is then processed by an onboard processor, which applies algorithms to create a digital image of the scene based on the thermal data. The resulting images show the temperature variations within the scene, with warmer objects appearing brighter and cooler objects darker. Thermal imaging camera cores are used in various applications, including surveillance, firefighting, industrial inspection, and medical imaging.
