Abstracts

The global Thermal Imager Core market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal imager cores are the heart of thermal cameras. They consist of an infrared sensor array that detects thermal radiation and converts it into an electrical signal. This signal is then processed by an onboard processor, which applies algorithms to create a digital image of the scene based on the thermal data. The resulting images show the temperature variations within the scene, with warmer objects appearing brighter and cooler objects darker. Thermal imaging camera cores are used in various applications, including surveillance, firefighting, industrial inspection, and medical imaging.

This report studies the global Thermal Imager Core production, demand, key manufacturers, and key regions.
