Abstracts

The global Thermal Immersion Circulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A thermal immersion circulator is an electrically powered device that circulates and heats a warm fluid kept at an accurate and stable temperature. It is used in process, environmental, microbiological, hazardous waste, and other laboratories. They have also been used for sous-vide food cooking, a method that uses airtight plastic bags in a water bath at accurately regulated temperatures much lower than usually used for cooking. A thermal immersion circulator comprises a circulator pump or motorized impeller to move the fluid, a heating element immersed in the fluid, an accurate temperature probe, and control circuitry which compares the measured temperature with the desired value and supplies power to the heater as required to stabilize the temperature.

This report studies the global Thermal Immersion Circulator production, demand, key manufacturers, and key regions.
