Abstracts

The robot is able to automatically move along a pre-programmed route, stop near electrical and other equipment subject to thermography, and aim a PTZ camera on it. Next, the manual remote control mode of the PTZ camera is turned on. The remote operator has the ability to conduct a remote inspection of equipment by examining two video images, visible and infrared spectrum. Upon completion of the inspection carried out under the control of the operator, the robot will continue its automatic movement to the next piece of equipment.
