According to our (Global Info Research) latest study, the global Thermal Insulation Board market size was valued at USD 25870 million in 2023 and is forecast to a readjusted size of USD 38000 million by 2030 with a CAGR of 5.6% during review period.

Thermal Laminate Board is typically constructed by combining plasterboard with insulating solid foam and paper facing. It provides excellent thermal insulation in homes and commercial buildings. It is often installed in internal walls, ceilings, roofs and decks.

Europe has been one of the mature markets, it's predicted to remain a major market for building thermal insulation board by 2029. Burgeoning residential and commercial construction activities in North America, coupled with the implementation of strict green building codes to reduce the energy consumption per structure are expected to aid growth. Furthermore, favorable government regulations for the adoption of the product for residential as well as commercial structures are expected to boost the growth over the forecast period. The Asia Pacific region is expected to exhibit the highest growth during the forecast period, owing to the rising construction activities in the region to cater to the requirements of a growing population. China is estimated to account for the largest share in the region, owing to the various government initiatives to improve its public infrastructure.
