## Abstracts

The global Thermal Liquid Mass Flow Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A thermal liquid mass flow meter is a sensor or instrument used to measure the mass flow of liquids. It is based on the principle of thermal sensing and determines the mass flow rate of a fluid by measuring the heat absorbed by the fluid as it flows through the sensor. Thermal liquid mass flow meters usually consist of two thermistors or thermocouples, one of which acts as the heat source and the other acts as the temperature measuring element. The heat source heats the liquid, while the temperature measuring element measures the change in temperature of the liquid as it passes through. The mass flow rate of the liquid can be calculated from the heat transfer effect. Thermal liquid mass flowmeter has fast response, high precision and wide application range. They are generally suitable for low to mid flow range liquids such as water, fuel oil, chemicals, solutions, etc. One of the advantages of thermal liquid mass flow meters is that they are not affected by changes in the density of the liquid because they measure the mass flow of the liquid rather than the volume flow.

This report studies the global Thermal Liquid Mass Flow Meter production, demand, key manufacturers, and key regions.
