## Abstracts

According to our (Global Info Research) latest study, the global Thermal LWIR Hyperspectral Remote Sensing market size was valued at USD 65 million in 2022 and is forecast to a readjusted size of USD 81 million by 2029 with a CAGR of 3.3% during review period.

Thermal hyperspectral imagers provide information that conventional spectral imagers cannot. A broader range of materials can be detected, mapped, and sorted by thermal hyperspectral imagers in the mid-wavelength infrared (MWIR) and/or long-wavelength infrared (LWIR) spectral range than by imaging systems that operate in the visible and near-infrared (VNIR) and short-wavelength infrared (SWIR) spectral regions. Previously commercially available thermal imagers were limited to Fourier Transform and chromotomographic imaging spectrometers, which have considerable limitations, i.e., only stationary targets can be imaged from stationary platforms.

This report covers Thermal long-wavelength infrared (LWIR) hyperspectral imaging cameras (Hyperspectral Cameras, Accessories).
