Thermal management is the process of controlling the excess heat generated by electronic devices. In the thermal management, various heat control techniques and solutions are used to prevent system breakdown of electronic devices.

SCOPE OF THE REPORT:

All electronic devices and circuitry generate excess heat and thus require thermal management to improve reliability and prevent premature failure. The amount of heat output is equal to the power input, if there are no other energy interactions. There are several techniques for cooling including various styles of heat sinks, thermoelectric coolers, forced air systems and fans, heat pipes, and others.

The worldwide market for Thermal Management System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
