Abstracts

According to our (Global Info Research) latest study, the global Thermal Oxide Silicon Wafers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A chemical layer on silicon can be formed through the shared valence electrons between oxygen and silicon. These bonds allow the surface of silicon to rid itself of the dangling bonds. Mid-gap states prevent the semiconductor from reaching its desired band gap. Since the native oxide layer is chemically different from the grown silicon dioxide, it is not the same material. The two layers have different physical properties. The former has a higher refractive index, which is similar to that of silicon dioxide. The latter is about half the thickness of the original layer.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
