## Abstracts

According to our (Global Info Research) latest study, the global Thermal Oxidizer market size was valued at US\$ 5556 million in 2024 and is forecast to a readjusted size of USD 8615 million by 2031 with a CAGR of 6.4% during review period.

Thermal Oxidizer is a kind of processing equipment to decompose industrial waste gas/liquid waste through high temperature oxidation, mainly used in hazardous waste incineration, petrochemical, pharmaceutical and other industries of medium and high concentration VOCs treatment. The core principle is to use the heat generated by the combustion of the auxiliary fuel to raise the exhaust gas temperature to the reaction temperature (usually >700 ° C), so that the harmful components are fully oxidized to CO<sub>2</sub> and H<sub>2</sub>O under sufficient oxygen, suitable residence time and turbulent conditions. When the exhaust gas concentration reaches a certain threshold, the system can achieve thermal self-equilibrium without the need for additional fuel.
