## Abstracts

The global Thermal Paper and NCR Paper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In Malaysia market, key players of thermal paper and NCR paper include Besto Sdn Bhd, Ace print sdn bhd, SBS Paper Products Sdn. Bhd, etc. Top three players hold a share approximately 47%.

Thermal paper is a special paper type that is manufactured with specialty coating that aids in inkless printing. On application of heat to the coating, a clear image is formed on the paper with no requirement for ribbons or inks. The coating usually turns black on heating, which, in turn, transfers the image to the paper. Thermal paper is the key component of thermal paper printing, which is considered one of the most economical printing technologies owing to its low energy consumption and low maintenance cost.

Thermal paper is originally termed as thermal fax paper or thermal recording paper. The paper is coated with a colorless formula, which will develop an image by the application of heat. The paper may be used as fax paper on fax machines, as thermal recording paper on cardiographic or industrial recording devices, or converted to ATM rolls or POS rolls for ATM or Place of Sale applications. Thermal paper with additional top-coat or semi top-coat may be used for logistic and supermarket labels, lottery tickets, train tickets, and many other applications.

Non-Carbonized papers are bond papers that have been coated with microencapsulated dye and reactive resins and clays. Carbonless papers consist of four distinct types of paper, Coated Back or CB, Coated Front and Back or CFB, Coated Front or CF, and self-contained paper or SC.
