## Abstracts

The global Thermal Paper Sensitizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal paper is a recording media to be printed with heat from the thermal printer. The sensitizers are organic molecules which are mixed with the other components of the paper. Sensitizers are solids but can be easily melted, allowing the dyes and developers to combine, effectively lowering the temperature at which the dyes change color, and allowing lower energy cost printing.
