The global Thermal Printing Plate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal printing plate is a type of printing plate used in the printing industry. Thermal printing is a digital printing process which produces a printed image by passing paper with a thermochromic coating, commonly known as thermal paper, over a print head consisting of tiny electrically heated elements. The coating turns black in the areas where it is heated, producing an image. Thermal printing plate is designed to provide an efficient and cost-effective way to print high quality images on paper or other surfaces.
