Abstracts

The global Thermal Sprayed Aluminum Coatings market size is expected to reach \$ 1235 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2025, global Thermal Sprayed Aluminum Coatings production reached approximately 32.50 million sqm, with an average global market price of around USD 24 per sqm.

The gross profit margin of major companies in the industry is between 16.72%-31.46%.

In 2025, the global production capacity of Thermal Sprayed Aluminum Coatings was approximately 42.76 million sqm.

Thermal Sprayed Aluminum Coatings are protective metallic coatings formed by melting or softening aluminum wire or powder and spraying it onto prepared substrates. The coating provides corrosion protection, oxidation resistance, sacrificial protection and thermal barrier support for steel structures, offshore equipment, pipelines, bridges, tanks, power equipment and industrial components. It is commonly applied by arc spray, flame spray or other thermal spray methods. The market includes aluminum thermal spray coating materials and coating services measured by coated area, but excludes paint-only coatings, galvanizing and unrelated ceramic thermal barrier coatings.

The industry chain includes aluminum wire, aluminum powder, compressed gases, spray guns, power supplies, abrasives, surface preparation equipment, sealing materials and coating inspection tools. Midstream activities include surface blasting, thermal spraying, thickness control, sealing, adhesion testing, porosity inspection and

corrosion performance validation. Downstream demand comes from marine structures, offshore platforms, bridges, pipelines, storage tanks, energy facilities, petrochemical plants and industrial maintenance. Growth is driven by corrosion protection needs, infrastructure renewal, offshore energy assets and long-life protective coating requirements.

Thermal sprayed aluminum coatings are applied in marine equipment, bridges, steel structures and aerospace components for anti-corrosion, wear resistance and high temperature protection. Their core advantages include strong adhesion, long service life, excellent corrosion resistance and good thermal conductivity. Market demand is driven by infrastructure construction and heavy industry equipment protection needs. Moving forward, coatings will develop towards multi-functional composite and eco-friendly processes.
