## Abstracts

The global Thermal Transfer Base Paper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal transfer base paper is used in the manufacture of thermal transfer paper, which is a type of special paper with transfer properties. Transfer printing refers to a printing method in which various graphics and texts are printed on a special kind of paper with special thermal transfer ink, and then the graphics and texts on the paper are transferred to the substrate by corresponding temperature and pressure. The first kind of paper that carries graphics and text is thermal transfer paper. Thermal transfer base paper has the characteristics of smoothness and equal thermal expansion and contraction rate, and is widely used in pattern thermal transfer carriers of clothing, building materials, furniture, porcelain, outdoor advertisements and many other items.
