According to our (Global Info Research) latest study, the global Thermally Conductive Insulators market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Thermally conductive insulators are materials that have good thermal conductivity while maintaining electrical insulation properties. They form an effective heat conduction path between electronic components and heat sinks or machine housings while preventing electrical short circuits. These materials can efficiently conduct and disperse heat, and due to their electrical insulation properties, they are divided into polymer-based composites, ceramic composites, metal composites, etc., which are suitable for thermal management of electronic and power equipment.
