Abstracts

Thermally conductive silicone is a high-end thermally conductive compound, and its non-solidified, non-conductive properties can avoid risks such as short circuits. Thermally Conductive Adhesive Sealing Silicone Rubber is a one-component, thermally conductive, room temperature curing silicone adhesive sealant. It is through the condensation reaction of moisture in the air to release low molecules to cause cross-linking and curing, and vulcanized into high-performance elastomers. It has excellent anti-cold and heat alternating performance, anti-aging performance and electrical insulation performance. And has excellent moisture resistance, shock resistance, corona resistance, leakage resistance and chemical resistance properties. Can be used continuously -60??280°C and maintain performance. Non-swelling and good adhesion to most metallic and non-metallic materials.
