Abstracts

According to our (Global Info Research) latest study, the global Thermally Powered VAV Diffuser market size was valued at US\$ 422 million in 2025 and is forecast to a readjusted size of US\$ 675 million by 2032 with a CAGR of 6.9% during review period.

Thermally Powered Variable Air Volume (VAV) diffusers are self-powered air distribution terminal products in HVAC systems, typically featuring built-in temperature sensors, wax-based thermal actuators, and adjustable dampers. They can automatically regulate airflow based on indoor temperature changes, eliminating the need for electrical or control wiring. These products are mainly used in offices, schools, conference rooms, hospitals, hotels, and other spaces that require zoned temperature control without complex wiring. In 2025, the global market is estimated at approximately USD 410 million, with a production volume of around 1.5 million units.

Thermally Powered Variable Air Volume (VAV) diffusers are a more mature and easy-to-install category within the VAV diffuser market. Compared with motorized and intelligent networked VAV diffusers, thermally powered products do not require motors, controllers, communication modules, or complex commissioning. As a result, their overall procurement and installation costs are lower, and they offer advantages such as no wiring and low maintenance. They can achieve room-level zoned temperature control, making them suitable for retrofitting existing buildings and small to medium-sized commercial spaces. Their growth is primarily driven by building energy efficiency, comfort improvement, and demand for zoned control.

Compared with motorized and intelligent networked products, thermally powered VAV diffusers are weaker in remote monitoring, BMS integration, and precise control.

Therefore, their future growth rate may be slightly lower than that of the overall VAV diffuser market. Overall, they are not expected to replace intelligent VAV systems but will maintain stable demand in projects where low cost, low maintenance, and ease of retrofit are priorities.
