According to our (Global Info Research) latest study, the global Thermo Compression Bonder market size was valued at USD 75 million in 2023 and is forecast to a readjusted size of USD 270.7 million by 2030 with a CAGR of 20.1% during review period.

Thermo Compression Attach. Using this technique, there are no adhesives to join the die and the package. Instead, heat and force are applied to the die in a process called 'Thermo Compression Bonding'. The bumps are forced against their opposing pads and a second metallic bond is formed where the bond comes into contact with the package metallization. This technique typically requires the use of heat as high as 350° to 400°C, and forces of as much as 100 g/bump.
