According to our (Global Info Research) latest study, the global Thermo Controller market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A thermo controller is a device or component that sends an ON/OFF signal to an electric heater or cooler unit to maintain the temperature of the object at a constant level.

It is equipped with a control board, power supply, sensor connection, heater connection, and cooler connection. From inexpensive devices that only turn ON/OFF near the set temperature, to PID control that detects subtle temperature changes and emits fewer ON control signals and more OFF signals when near the set temperature, and more ON signals and fewer OFF signals when away from the set temperature, maintaining the temperature near the set temperature. There are even expensive ones with built-in programs.
