## Abstracts

Thermoplastic prepreg fiber or its fabric used in the manufacture of composite materials coated with thermoplastic resin matrix, belonging to intermediate materials. Its form is mainly divided into one-way prepreg, fabric prepreg and fiber prepreg. Although thermoplastic resin prepreg can also be prepared by wet and dry methods, but the process is more complex than the general thermosetting resin prepreg. Because the thermoplastic resin (especially the crystalline thermoplastic resin) good solvent resistance and heat melting temperature is high, therefore, thermoplastic resin in material, usually using the melt method, suspension method and powder prepared by static adsorption. Its characteristics, the major technical indicators are: presoak resin content, its distribution and volatile matter content and fiber quality of per unit area.
