According to our (Global Info Research) latest study, the global Thermoelectric Cooler Controller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The thermoelectric cooler controller is a device for regulating the temperature of the thermoelectric cooler (TEC) module. TEC is a solid-state device. When voltage is applied to one side of the module, it can heat or cool the system by transferring heat from one side of the module to the other. The thermoelectric cooler controller monitors the temperature of the system and adjusts the voltage applied to the TEC to maintain the desired temperature. It usually includes temperature sensor, microcontroller and power stage driving TEC.
