Abstracts

The global Thermoforming Plastic Packing market size is expected to reach \$ 15942 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

Thermoformed plastic packing refers to packaging products made primarily from thermoplastic sheets, films, or plates. The process involves heating the material until it softens, then using techniques such as vacuum forming, pressure forming, or mechanical forming to shape the plastic against a mold; the material is subsequently cooled and set to form the final product. These products serve functions including protection, storage, transportation, and display, while also helping to extend the product's lifecycle. In 2025, the global sales volume of thermoformed plastic packing is projected to reach 7.14 million tons, with a production capacity of approximately 10.20 million tons, an average selling price of \$1,680 per ton, and an average gross profit margin of 20%-30%.

The thermoformed plastic packaging industry is poised for continued steady growth, driven primarily by the premiumization of food consumption, the expansion of medical packaging, the demand for lightweighting, and the development of sustainable packaging. While traditional thermoformed packaging made from PET, PP, and PS will retain a significant market share in the food and consumer goods sectors, single-use plastic packaging may face substitution pressure from paper-based packaging, molded fiber packaging, biodegradable materials, and reusable packaging systems. Concurrently, environmental regulations are likely to increase raw material costs and compliance expenditures for enterprises, placing pressure on manufacturers of low-end thermoformed packaging. Overall, the focus of industry competition will shift from mere cost-based rivalry to competition centered on material innovation, recycling capabilities,

functional design, and customer certification; key growth segments will include medical-grade thermoformed packaging, high-barrier food packaging, packaging made from recycled materials, and sustainable, eco-friendly packaging.
