Thermoluminescent Dosimeter (TLD) services refer to the provision of monitoring and measurement services using thermoluminescent dosimeters, which are devices designed to measure an individual's exposure to ionizing radiation. These services are crucial in various industries and applications where radiation safety and monitoring are essential, such as healthcare, nuclear power, radiography, and industrial settings.

Digital TLDs, also known as Optically Stimulated Luminescence Dosimeters (OSLDs), have gained popularity. They offer advantages such as faster reading times, immediate results, and improved accuracy compared to traditional TLDs. OSLDs use LEDs or lasers to stimulate the luminescence of the dosimeter material for reading.
