## Abstracts

Thermoplastic polycarbonate resin is a tough thermoplastic resin whose name comes from its internal CO<sub>3</sub> group. Can be synthesized from bisphenol A and carbon oxychloride. High molecular polymers containing carbonate groups in the molecular chain can be classified into aliphatic, aromatic, and aliphatic-aromatic types according to the structure of the ester group. Among them, due to the low mechanical properties of aliphatic and aliphatic-aromatic polycarbonates, their application in engineering plastics is limited. Only aromatic polycarbonates have been produced industrially. Due to the structural speciality of polycarbonate, it has become the fastest growing general engineering plastic among the five major engineering plastics.

According to our (Global Info Research) latest study, the global Thermoplastic Polycarbonate Resin market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
