Asia Pacific is the largest market, with a share over 45%, followed by North America and Europe, both have a share over 45%. The global origin is mainly distributed in North America, Europe, China, Japan and Korea, etc., of which Europe is the largest production area, holding 34% of the market share. In terms of product, Injection Molding Grade is the largest segment, with a share over 45%. And in terms of application, the largest application is Automotive Industry, followed by Industrial Products, Consumer Products, etc.

Thermoplastic Polyester Elastomer (TPEE) is a block copolymer who contains a hard segment of polyester and a soft segment of polyether; wherein the amorphous is formed from the soft segment of polyether and the uncrystallized polyester. Micro-crystals play a role as physical crosslinking points formed from the hard segment of the polyester. Thermoplastic polyester elastomer has the rubber elasticity and strength of engineering plastics. Soft segment gives it flexibility to make it like rubber; hard segment assigns the processing properties which makes it like plastic. Compared with rubber, it has a better processing performance and longer life; and the same high strength characteristics compared to plastic, while the flexibility and dynamic mechanical properties is better.
