According to our (Global Info Research) latest study, the global Thermoplastic Polyolefins market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Thermoplastic polyolefin is a light weight material which is a major product in thermoplastic elastomers family. It has lowest specific gravities compared to all other thermoplastic elastomers. TPO is extensively used in automobile and construction industry.

There is a rise in construction activities across the world especially in the developing regions. The growth in population and the change in weather conditions have resulted in the emergence of various types of roofing for both the residential and commercial purposes. Single ply roofs are increasingly used for the last 20-30 years and are widely popular due to their benefits such as flexibility, easy installation, and affordability. TPO, PVC, and EPDM are the some of the widely-used types of single ply roofs. Since TPO is environment-friendly and is 100% recyclable, the coming years will witness a increase in its demand for roofing applications.
