According to our (Global Info Research) latest study, the global Thermoplastic Starch Alloy market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Thermoplastic starch alloy is an environmentally friendly material formed by blending starch with thermoplastic polymers (such as polylactic acid, polyethylene, etc.). After plasticization, starch has thermoplastic properties, which can soften when heated and harden after cooling, similar to the processing properties of conventional plastics. This alloy material is biodegradable and widely used in packaging, agricultural films, disposable products and other fields. It helps reduce plastic pollution and is a sustainable alternative material.
