## Abstracts

According to our (Global Info Research) latest study, the global Thermoset Molding Compounds market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A thermoset material is made of polymer resins that are cured through a heat and chemical cross-linking process. This curing process transforms the resin into its final form. Once the cross-linking has taken place, the material cannot be melted or re-shaped. Thermoset materials are generally stronger than thermoplastic materials and are better suited to high-temperature and high-strength applications. Thermoset materials are an excellent candidate for products being considered for metal replacement.

Looking to the future, new energy electric vehicles are expected to come into more common use around the world, and this will drive continuous growth in demand for Thermoset Molding Compounds. The market for advanced equipment is set to expand, spurred by the development of newer products and broader areas of application. Accordingly, the demand for automotive components will likely grow, a prospect for which ensuring a stable supply of Thermoset Molding Compounds is expected to become increasingly important.
