According to our (Global Info Research) latest study, the global Thermoset Unidirectional Tapes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In contrast to thermoplastics, thermosets (alternately known as Thermoset plastics or Thermoset polymers) are materials which remain in a permanent solid state after being cured one time. Polymers within the material cross-link during the curing process to perform an unbreakable, irreversible bond. This means that thermosets will not melt even when exposed to extremely high temperatures.
