Abstracts

The global Thermoset Unidirectional Tapes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In contrast to thermoplastics, thermosets (alternately known as Thermoset plastics or Thermoset polymers) are materials which remain in a permanent solid state after being cured one time. Polymers within the material cross-link during the curing process to perform an unbreakable, irreversible bond. This means that thermosets will not melt even when exposed to extremely high temperatures.

This report studies the global Thermoset Unidirectional Tapes production, demand, key manufacturers, and key regions.
