Thick Film Laser Trimming Machine is a special device for precise trimming of thick film resistors based on laser technology. Its core function is to cut resistor materials through laser beams and change their geometric shape to achieve precise control of resistance (accuracy can reach $\pm 1\%$ or even 0.1%). It is mainly used for resistor fine-tuning of thick film circuits. The device adopts non-contact processing technology and has the characteristics of high precision, high efficiency (single resistance trimming time only takes tens of milliseconds) and low pollution. It is widely used in automotive electronics, sensors, aerospace and industrial electronics.
