Abstracts

According to our (Global Info Research) latest study, the global Thickened U-Shaped Silicon Carbide Rod market size was valued at US\$ 54.06 million in 2025 and is forecast to a readjusted size of US\$ 83.02 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global production of thickened U-shaped silicon carbide rods reached 1.42 million units, with an estimated average selling price of US\$37 per unit. Thickened U-shaped silicon carbide rods are a type of non-metallic high-temperature heating element made primarily from high-purity silicon carbide through processes such as blank preparation, high-temperature silaneization/recrystallization, end metallization, and resistance matching. Two silicon carbide rods with similar resistances are connected in a U-shape by a thickened bridge section, ensuring that the two terminals are located on the same side of the furnace body. They are mainly used in pusher furnaces, box furnaces, bogie furnaces, roller kilns, ceramic sintering furnaces, glass melting and annealing furnaces, powder metallurgy furnaces, metal heat treatment furnaces, magnetic material sintering furnaces, electronic ceramics, and laboratory high-temperature furnaces. The upstream of the industry chain mainly includes green silicon carbide powder, petroleum coke/silica/carbon materials, binders, aluminum metal spraying materials, ceramic insulation components, fixtures, and packaging materials; the midstream includes silicon carbide rod forming, sintering/recrystallization, resistance sorting, end metallization, size customization, and furnace heating element assembly; the downstream includes industrial furnace manufacturers, ceramic and refractory material companies, glass companies, powder metallurgy and metal heat treatment companies, electronic ceramic/semiconductor material companies, and laboratory equipment manufacturers. Gross profit margin is approximately 20%-40%.
