The global Thickener Excipients market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thickener excipients are substances added to pharmaceutical formulations to increase their viscosity and improve their physical properties. They can be natural or synthetic and work by altering the rheological properties of the formulation, such as its flow behavior and texture. Thickener excipients are used in a wide range of pharmaceutical products, including creams, ointments, gels, and suspensions. Common examples of thickener excipients include cellulose derivatives, natural gums, and synthetic polymers. They play an important role in ensuring the stability, efficacy, and patient acceptance of pharmaceutical formulations.
