According to our (Global Info Research) latest study, the global Thickeners Equipment market size was valued at US\$ 345 million in 2024 and is forecast to a readjusted size of USD 508 million by 2031 with a CAGR of 5.7% during review period.

Thickeners are large, circular industrial equipment used for the solid-liquid separation process, primarily in mining, mineral processing, wastewater treatment, and chemical industries. They work by allowing fine solid particles to settle under gravity, producing a concentrated sludge (underflow) at the bottom and a clear liquid (overflow) at the top. The process often involves the addition of flocculants to aggregate fine particles and enhance settling efficiency. Thickeners are essential for dewatering tailings, recycling process water, and reducing waste volume, making them critical for efficient and sustainable operations in industrial plants. Variants include conventional, high-rate, and paste thickeners, each tailored for specific applications and operational needs.
