## Abstracts

According to our (Global Info Research) latest study, the global Thin Client market size was valued at US\$ 1497 million in 2025 and is forecast to a readjusted size of US\$ 2913 million by 2032 with a CAGR of 10.0% during review period.

In 2025, global output of thin clients reaches 5.5 million units, with an average selling price of 265 USD per unit, total production capacity of 6.2 million units, and a gross margin of 24%.

A thin client is a lightweight computing terminal designed to rely on centralized servers, virtual desktop infrastructure (VDI), or cloud platforms for data processing, application execution, and storage. The device itself performs minimal local computing tasks and primarily handles input/output, display rendering, and network communication. Thin clients are widely used in enterprise IT environments, education, finance, healthcare, and government sectors due to centralized management, enhanced data security, lower maintenance cost, and reduced energy consumption.

Overall, the thin client market shows structural growth driven by remote work adoption, increasing data security requirements, and accelerated deployment of cloud desktops and VDI solutions. Although influenced by improvements in traditional PC performance and cloud-device convergence, thin clients continue to maintain stable demand in sectors requiring high security and centralized control. Future competition will increasingly focus on system compatibility, low-power design, remote management capability, and integrated solution offerings.
