#### **Abstracts**

According to our (Global Info Research) latest study, the global Thin Film Distillation System market size was valued at US\$ 67.3 million in 2024 and is forecast to a readjusted size of USD 92.3 million by 2031 with a CAGR of 4.7% during review period.

Thin film distillation is a specialized form of distillation used to separate components of a mixture with very high boiling points or those that are thermally sensitive. Thin film distillation was developed to provide low evaporation temperatures, low vacuum and thus minimize residence time in the evaporator. It is particularly useful in industries such as chemical, pharmaceutical, and cannabis extraction, where precise separation of components is crucial. Thin film distillation system is a type of evaporator, which is characterized by the film-like flow of material liquid along the wall of the heating tube for heat transfer and evaporation. The advantages are high heat transfer efficiency, fast evaporation speed, and short material residence time.

Global key players of Thin Film Distillation System include MAX STREICHER, Sulzer, Pope Scientific, Agrify, De Dietrich Process Systems, etc. The top five players hold a share about 48%. North America is the largest market, and has a share about 37%, followed by Europe and Asia-Pacific, with share 31% and 25%, separately. In terms of product type, Wiped Film Evaporators is the largest segment, accounting for a share of 67%. In terms of application, Chemical is the largest field with a share about 50 percent.
